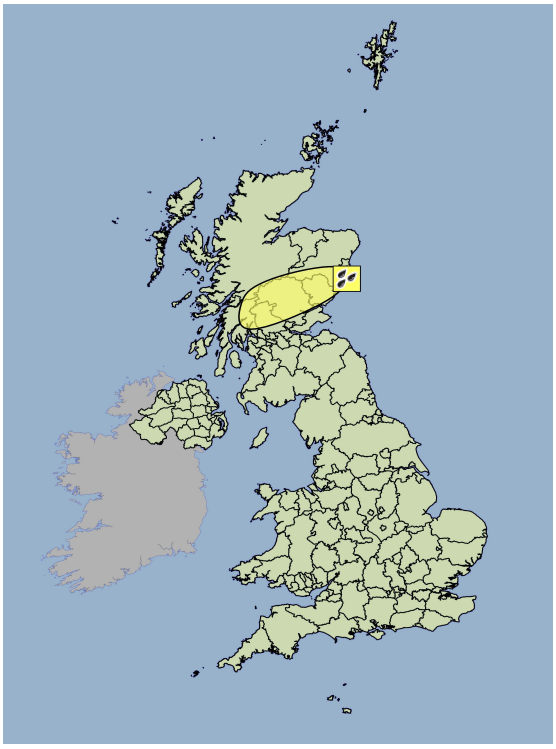
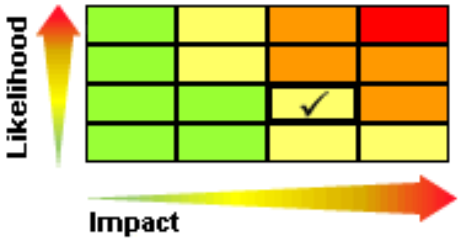
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system is expected to cross Scotland from the west on Tuesday, clearing away eastwards during Wednesday. This will bring rain to most parts, heaviest across south-facing high ground where 20-40 mm is likely to accumulate, and locally a little more across prone spots.

In addition, 5-10 cm of snow is expected to settle above about 500 metres.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **16:15 on Tue, 21st Jan 2014** until **12:00 on Wed, 22nd Jan 2014**

Rain will continue to extend east into northeastern Scotland on Tuesday evening, becoming persistent and heavy at times overnight in the highlighted area. Drier weather will reach Argyll in the early hours but rain is expected to linger across the east until the end of Wednesday morning. There will be snow above about 500 metres.

The public should be aware that the rain, falling on already saturated ground, will lead to a risk of localised flooding.

This is an update to the warning issued on Monday to include southern parts of Aberdeenshire.
